The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claim is merely a narrative of a desired function without any specific circuit structure and/or how any of the parts are structurally related in order to provide the desired function. There's no way of determining the metes and bounds of the claim. Because the claim is so vague and indefinite it is not possible to apply prior art at this time.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7, 10, 11 and 13-16 are rejected under 35 USC 102 (b) as being anticipated by Suganuma (478). Referring to figures 4 and 10, Suganuma shows a drive circuit for a resonant piezoelectric motor that includes a resonance sensor, a reference signal generator, a divider, a phase reference section, a voltage comparator, a phase comparator and a duty control section (also note column 7, lines 2-5; column 13, line 53-column 14, line 46 and column 17, line 13-column 18, line 20). The following

Art Unit: 2834

is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8 and 9 are rejected under 35 USC 103 (a) as being on patentable over Suganuma (478) in view of Suganuma (609). Suganuma (478) as described above teaches the basic structure of the circuit but does not explicitly provide first and second phase correction sections between the voltage comparator and a face comparator. However, in figure 30, and as described at column 6, line 57-column 8, line 34, Suganuma (609) teaches providing such an adjustment to keep the desired device at the operating frequency, which in this case is the anti-resonant frequency. It would have been obvious to one of ordinary skill in the art that this control means could be used to provide a chosen drive frequency regardless of what that frequency is (resonant or anti-resonant) and could be used in conjunction with Suganuma (478) in order to increase the efficiency of the drives were.
